PRESS RELEASE

FOR IMMEDIATE RELEASE:

**SolCool One, LLC and CleanField Energy
Execute VAWT Distribution Agreement**

Redlands, California May 25, 2007 - SolCool One, LLC and CleanField Energy Ancaster, Canada finalized their Dealer Agreement this week on the new CleanField Energy 3.5kW rated power Vertical Axis Wind Turbine. “We feel confident the CleanField wind generator will qualify for the pending federal legislation; S.673 and H.R. 1772, “Rural Wind Energy Development Act” that AWEA advocates and will be of great help to farmers, homeowners and small to medium sized businesses in leveling power costs at a more traditional factor of operating cash flow” said Mark Walsh, Manager of SolCool One, LLC.

CleanField’s turnkey wind generator has an estimated annual average output of 9000kW per year with only a 9 m/s average low profile, omni-direction wind environment and a life expectancy of 20-30 years.

“This turnkey system allows for rapid deployment in a variety of climactic conditions that create a great deal of synergy with our global distribution network” said Clifford Sutton, V.P. Global Sales and Marketing. Mr. Sutton added, “Unlike other VAWT systems that show a great deal of promise, the CleanField system is available for sale now”.
