

PRESS RELEASE

FOR IMMEDIATE RELEASE:

SolCool's Solar Air Conditioner Blows Off Hurricane Ike

September 18, 2008, Redlands, CA - SolCool One, LLC's solar air conditioning distribution partner; Alternative Energy Group located south of Houston, Texas returned from evacuation to find their 1.5 ton Millennia solar air conditioning demonstration system undamaged and ready to operate.

"Our ground mounted solar panels and the Millennia cabinet that houses the DC compressor, condenser, DC charging electronics and battery bank all escaped outside damage and was ready to cool when we returned", reported Milton Cecalek, President of Alternative Energy Group.

Mr. Cecalek had been augmenting his demonstration space daily with the Millennia since installation in June of this year. From the beginning the solar AC augmentation trimmed over \$100.00 per month from his electric bill. "It was great to have the air conditioning without having to start a generator", Mr. Cecalek said, "The Millennia system already runs whisper quiet, so not having the generator noise kept us all a lot calmer", he noted.

The Millennia is globally distributed by SolCool One, LLC of Redlands, CA. Current production of the 18,000 BTU, DC split heat pump in Guangzhou, China by its manufacturing partner Senergy Cooling Systems combines up to 70% less power consumption over conventional hardware a unique intelligent DC/AC charger power input, a proprietary DC adapter and deep cell energy storage that results in a revolutionary new way to effectively and efficiently climate control.

SolCool One, LLC and Senergy Cooling Systems will have a three and five ton version of the Millennia available in the Spring of 2009. For sales and dealer information please visit www.solcool.net or call 888-476-5266.
