

PRESS RELEASE

FOR IMMEDIATE RELEASE:

SolCool One, LLC Launches Global Distribution of SeaPure Filtration Systems

September 23, 2008, Redlands, CA - SolCool One, LLC launched its internet promotion of the SeaPure line of oily water separators manufactured by EMCO, Inc. of El Dorado, Kansas. “SeaPure systems are an excellent fit with our other energy efficient hardware and does a remarkable job mitigating a serious water pollution problem”, stated Clifford Sutton, Vice President of Sales and Marketing at SolCool One, LLC.

SeaPure’s latest technology provides boat owners and operators an alternative to standard oily water separators currently in use today. This bilge water extraction system is a filtration vessel containing a patented high-absorption capacity media for oil and grease removal -- effectively removing oil from bilge water to as low as 5 ppm -- well below environmental and coast guard required levels.

“The SeaPure system will constantly keep the bilge water load in a vessel to a bare minimum at all times increasing fuel efficiency, eliminate the possibility of a fine for discharging bilge water back into the environment that is out of compliance and drastically reduce the costly dock side bilge water removal and separator service necessary without a SeaPure system” said Daryl Emmons, manufacturer of the SeaPure system and President of EMCO, Incorporated.
